Career Objective:

Aspiring Full Stack Developer with experience in **React.js, Node.js, JavaScript, MongoDB** and modern web development tools. Skilled in building responsive interfaces, writing clean code, solving technical problems, and collaborating with teams. Seeking a role to contribute to product and team growth in a dynamic environment.

SKILLS

- **Languages:** JavaScript (ES6+), Java.
 - **Frontend:** React.js, Redux, Context API, HTML5, CSS3, Responsive Design.
 - **Backend:** Node.js, Express.js, RESTful APIs, JWT Authentication.
 - **Database:** MongoDB, Mongoose.
 - **Tools & Platforms:** Git, GitHub, VS Code, Postman, Jupyter Notebook.
 - **Core Concepts:** Data Structures & Algorithms (DSA), OOP, Machine Learning (LSTM, MFCC).
-

PROJECTS

YouTube Clone – Video Sharing Platform | *MERN Stack (MongoDB, Express, React, Node)*

- Developed a scalable video sharing platform featuring user authentication, channel management, video uploads, and commenting systems.
- Implemented JWT-based authentication to secure backend APIs and protect frontend routes, ensuring robust access control.
- Designed complex MongoDB schemas to efficiently manage relationships between channels, subscribers, and video content.
- Built a responsive UI using React Router and Context API for seamless navigation and global state management.

RESUME

ShoppYGlobe – E-commerce Application | *React.js, Redux, Context API*

- Developed ShoppYGlobe e-commerce web application using React, implementing component-based architecture with Redux, Context API & custom hooks for scalable state management.
- Integrated product listing & details pages with API fetching (dummyjson.com) using useEffect, implemented search, cart management, checkout flow, with lazy loading and responsive UI.
- Implemented dynamic routing with React Router, reusable components with props, and proper error handling for a smooth user experience.

Speech Emotion Recognition | *Machine Learning, LSTM*

- Developed a Speech Emotion Recognition model using LSTM, enabling accurate classification of emotions from raw audio inputs.
- Implemented comprehensive data preprocessing workflows, including noise reduction, normalization, and segmentation to improve model robustness.
- Performed feature extraction using MFCC, converting audio signals into meaningful feature sets that significantly enhanced training efficiency and model performance.

EDUCATION

B.Tech, Information Technology | 2022 – 2025 *Gokaraju Rangaraju Institute of Engineering and Technology, Hyderabad*

Diploma in Engineering | 2022 *Kshatriya College of Engineering*

SSC (Class X) | 2019 *ZPHS Borgam (P)*

CERTIFICATIONS

- Full Stack Development (MERN) – Internshala
- Data Structures and Algorithms – Smart Interviews
- JavaScript & HTML/CSS – Internshala
- Java Programming – Spoken Tutorials
